Riemeiereyoung V. Lumapay

HighLevel CRM & AI Automation Specialist

CRM Systems | App Integrations | Workflow Automation | Funnels & Websites

Cebu, Philippines | riemeiereyoung20@gmail.com | View Project Portfolio

PROFESSIONAL SUMMARY

CRM, funnel and automation specialist with **1 year of hands-on experience building funnels** and **6 months of hands-on experience building automations, including GoHighLevel (GHL)**. Builds portfolio projects with CRM pipelines, email follow-up, booking workflows, funnels and websites. Connects business applications through Zapier, Make, n8n, webhooks, API-key integrations and MCP tools, supported by AI-assisted development. Two years of Amazon product research and virtual assistance provide practical knowledge of ecommerce operations and business processes.

CORE SKILLS

HighLevel CRM: CRM and sub-account setup; pipelines and opportunities; forms, surveys and custom fields; calendars; email follow-up; triggers, conditional logic and troubleshooting; A2P setup assistance in HighLevel.

App integration: Webhook integrations; API-key connections; Model Context Protocol (MCP) tools; Zapier, Make and n8n setup and workflow configuration; Google Sheets synchronization and Slack alerts.

Zapier AI agents: Lead follow-up, overdue invoice reminder follow-up, lead research and content repurposing. Hands-on project experience connecting apps and configuring automated tasks.

Funnels and websites: HighLevel funnels, landing pages, lead capture and calendar integration; AI-assisted website building with Lovable and HighLevel AI Website Builder.

Development tools: Hands-on use of Codex and Claude Code in VS Code for AI-assisted coding, prototyping, troubleshooting and project development.

Process design: Business process mapping, pain-point identification, CRM architecture, workflow planning, human checkpoints and system documentation.

FUNNEL AND AUTOMATION EXPERIENCE

Funnel Building

1 year of hands-on project experience

- Build sales funnels and landing pages with lead capture forms and calendar integration.

Automation Building

6 months of hands-on project experience, including GoHighLevel

- Design and build CRM systems and workflows; connect pipelines, calendars, forms and email automation for lead and appointment management.
- Build and test app integrations through webhooks, API-key connections and MCP-enabled tools, with Zapier, Make and n8n.
- Offer A2P setup assistance within HighLevel alongside CRM, automation and website services.

SELECTED PORTFOLIO PROJECTS

Dental Implant Lead-to-Consultation Automation

HighLevel + Zapier + Google Sheets + Slack

- Mapped and built a three-stage lead journey with inquiry intake, email follow-up, consultation booking and Lost status handling.
- Implemented opportunity reuse for returning Lost leads, protection for booked leads, and removal from reminder workflows after booking.
- Connected three webhook-driven Zaps to create or reuse tracker rows by Contact ID, validate appointment data and send Slack booking alerts.
- Completed a live inquiry-to-booking test confirming one opportunity, one tracker row, email receipt, booking updates, a Slack alert and stopped reminders; documented Spam placement and other production limitations.

Car Rental CRM & Automation System | HighLevel

- Mapped the rental process from booking request and confirmation through active rental, return inspection, completion and Lost / Cancelled handling.
- Built a six-stage opportunity pipeline, a rental calendar for multiple vehicles, custom rental fields and six purpose-built workflows.
- Automated booking messages, confirmations, timed return reminders and completion follow-up, with human checkpoints for deposits and vehicle inspection.

PREVIOUS EXPERIENCE

Amazon Product Researcher / Virtual Assistant

Private client work | Two years of experience

- Conducted Amazon product and market research to identify opportunities and support business decisions.
- Supported daily ecommerce operations as a remote virtual assistant and developed practical knowledge of business processes.
- Identified process inefficiencies and explored practical improvements using tools, applications and automation.
